Specification

1. The disclosure is objected to because of the following informalities: there are missing serial numbers from page 1, first paragraph.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 depends from itself. Also, 'the abnormal breathing pattern' lacks antecedent basis.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1,3,5,6,7,10-18,24,26 are rejected under 35 U.S.C. 102(e) as being anticipated by Cho et al (US 2002/0193697).

Art Unit: 3762

Cho includes a first sensor which is located at the end of a lead inserted into the patient's heart to detect intrinsic activity, and at least one other sensor to detect a condition related to sleep apnea, as taught in paragraph 35. Figure 3 of Cho also shows control logic 320 and microprocessor 310.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2,4,8,9,19-23,25 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Cho et al.

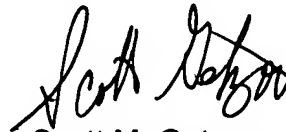

To have the ability to detect a sleep condition, although not explicitly mentioned in the disclosure of Cho, is considered to be implicit in the workings of the Cho device. Similarly, one would realize that to detect sleep apnea, it would also be obvious to first detect a sleep condition of the patient. Still further, monitoring of intrinsic heart rate is implicit if the heart is to be paced at a rate greater than the intrinsic rate, such as during overdrive pacing. The intrinsic rate must first be sensed to determine what it is.
